

CLAIMS

1. (Currently amended) A device for mounting on ~~an implement carrier~~ a lifting device comprising a fork structure, such as a fork lift truck, hoisting crane or the like in order to move, hold or lift an object, characterised in that the
5 lifting device comprises comprising
 - a carrier part comprising sleeves which can be mounted on the fork structure of the lifting device ~~is mounted on the implement carrier preferably by the carrier part being in the form of a sleeve which is inserted on the implement carrier's fork structure, and~~
 - 10 - a holding part which is attached to the carrier part, the holding part being provided with at least one securing device ~~with characteristics that make it possible to secure~~ which is capable of securing an object by contact between at least one of the object's surfaces and the securing device,
 - 15 - a trigger ~~that ensures that the forces acting between the object's surface and the securing device are broken or discontinued, thus and a line for releasing the object, the line being connected to the trigger and to the lifting device when the device is mounted to the lifting device, and~~ the trigger is being a guide part which is rotatably mounted to the holding part, where, on being rotated, the guide part pushes the object away from the securing device to a distance which
20 is sufficient for the forces between the object and the securing device to decrease and the object to be released from the holding device.
2. (Cancelled)
3. (Currently amended) A device according to claim 1,
~~characterised in that~~ wherein the securing device is one or more
25 electromagnets (1) or permanent magnets (1).
4. (Cancelled)
5. (Currently amended) A device according to claim 1,
~~characterised in that~~ wherein the fork can be telescoped and that there is a fixed connection between a stationary part of the fork and the guide part, so that
30 the guide part will be rotated when the fork is fully extended telescopically.
6. (Cancelled)
7. (Currently amended) A device according to claim 1,
~~characterised in that~~ wherein the trigger is operated manually or by means of an actuator.
8. (Currently amended) A device according to claim 1,
~~characterised in that~~ wherein one or more supporting edges are
35 ~~permanently or removably~~ mounted in the lower edge of the holding part.

9. (Currently amended) A device according to claim 1,
~~e-h-a-r-a-c-t-e-r-i-s-e-d-i-n-t-h-a-t~~ wherein the holding part is oriented substantially
vertically relative to the carrier part and/or that the holding part is mounted
rotatably ~~or-preferably-hingedly~~ on the carrier part, thus enabling the holding part to
5 be moved to another desired position and fixed in this new position.
